Confidential Report: Project Orion

Project Orion is a top-secret initiative spearheaded by the Advanced Systems Division.

The project's objective is to design and develop next-generation autonomous defense systems using artificial intelligence.

Key Milestones:

- Phase 1 (Q1 2023): Requirement gathering and concept validation.

- Phase 2 (Q2 2023): Prototype development and AI integration.

- Phase 3 (Q4 2023): Field testing in controlled environments.

- Phase 4 (Q2 2024): Partner collaboration and scaled deployment.

Project Orion leverages Azure AI services, including custom models for target detection, environmental scanning, and real-time decision-making.
The system is designed to operate in GPS-denied environments and adapt to dynamic threats using reinforcement learning.

Access to project documentation is strictly restricted. All communications must be encrypted and logged for compliance.

Lead Researchers:

- Dr. Eliza Tran (AI Systems Architect)

- Major Samuel Drake (Defense Operations Liaison)

- Ava Kohli (Azure Systems Engineer)
